

Funti3r-pay High Level Architecture Diagram

Funti3r-pay High Level Architecture Diagram

Architecture Flow Description

User Entry Points:

- Enterprise Dashboard (web-based) for BPOs and marketplaces
- Worker Mobile App for payment tracking and method selection

Core Processing:

- API Gateway handles all incoming requests with rate limiting and authentication
- Microservices handle specific business domains (payments, compliance, analytics, user management)

Blockchain Integration:

- Payment Service creates and manages Soroban smart contracts for escrow
- Direct integration with Stellar network for instant settlement

External Services:

- KYC/AML providers for compliance verification
- Stellar anchors (MoneyGram, Airtm, Puntored) for local currency conversion

Data Storage:

- PostgreSQL for transactional data (payments, users, compliance records)
- Redis for session management and real-time caching
- MongoDB for analytics and reporting data
